

MARIA BHAWAN COMMUNITY, JAMSHEDPUR

We are called to take care of creation so as to ensure that all benefit equally from the earth's resources.

The following steps are taken to experience ecological conversion, and we seek to live in harmony with nature.

The following steps are taken to promote changes in the ecological system:-

- ❖ Adopt a simple lifestyle. Use more locally produced food items.
- ❖ Use only what is necessary; do not waste anything
- ❖ Minimizing the use of plastics
- ❖ Prevent and reduce biodiversity degradation by growing indigenous plants and trees
- ❖ Promote ecological awareness to our students
- ❖ Disposing of waste conforming to ecological norms.

Hostel students are instructed and motivated well not to waste or use things lavishly. Ecological awareness programmes are conducted for our students.

Encourage the student to take care of the flower garden and a small kitchen garden; they have understood the need to take care of the earth with more care and attention than ever before. Air pollution and water pollution are increasing day by day due to selfishness and greed.

We pray to God our creator for enlightenment and wisdom to protect and take care of creation, making the earth a better place to live as brothers and sisters living in harmony with nature.
